

## WordPress Software Set Up Tips (InMotion Hosting)

**Choose protocol.** I used my website **https://ahselannecom**

**Choose domain.** Select the domain name you want install

**In directory.** Leave this blank to you can install on the website directly.

**Site name.** This is the name of your WordPress website.

**Site description.** This is your tag line or a description of your website. i.e You're in Good Hands or Like a Good Neighbor or this site deals with crochet items.

**Enable multisite (WPMU).** Make sure this box is unchecked

**Admin username.** Enter a username for your WordPress Website. This will be your username login.

**Admin password.** Enter a password. This will be your Wordpress password

**Admin email.** Enter an email address for your WordPress Dashboard login. This is where you would put the email that you set up that matches your website. (remember this was a tip from earlier) or you can just whatever email you have set up.

**Select language**

**Limit login attempts (Loginizer).** You may want to check this box to limit login in attempts. This can increase your security on your account.

## WordPress Software Set Up Tips (InMotion Hosting)

**Choose a Theme to Install.** Select none. There are plenty of themes available through the website. I would wait and set up a theme once you get log into the actual website.

**Advanced options.** Just leave the value as is.

**Install.** Click Install...WordPress will begin installing. Once the installation process is completed you will see your login information and you should received a confirmation email
